PREFACE

This report, formerly published bimonthly by the GMAIC Deployment Working Group (DWG) in mimeograph form, has been expanded to include additional data. It will continue to be published bimonthly in this new format.

Dissemination of the report was previously limited to holders of the DWG report, Soviet Surface-to-Surface Missile Deployment. Because the information contained herein is both supplemental and self-sustaining, distribution will no longer be limited to holders of the above report.

The current format provides a comprehensive, ready reference listing of all ICBM, IRBM, and MRBM deployment locations, types of site configurations, photographic references, estimated construction and operational status, and other evaluations of the DWG. Additional data may be added to future revisions.

[redacted]

25X1

INTRODUCTION

This report is the ninth revision of Evaluations of Soviet Surface-to-Surface Missile Deployment prepared by the Deployment Working Group of the Guided Missiles and Astronautics Intelligence Committee. The eighth revision, dated 1 August 1963 and disseminated under control number [redacted] should be destroyed in accordance with existing instructions for handling [redacted] material. [redacted] has provided additional information on the Soviet ballistic missile deployment program. The new data are reflected in the estimates and operational status shown in Tables 2 and 3.

Type II - Any road-served soft site. Since [redacted] we have identified four deployed variations of this basic concept. These have been designated as Type II A, B, C, and D. Type II sites at Tyura Tam are located at Launch Complexes C and E.

25X1

Type III - Any hard launch site. Type III prototype sites have been identified at Launch Complexes D and F at Tyura Tam. Although there has been some question as to the number of launch silos at hard sites, it is the considered judgment that it is more likely that the hard ICBM sites identified to date have three launch silos. As stated in the 1 August report there appear to be two variations of the hard site configuration. These variations are designated as:

Type IIIA - Those hard sites resembling Launch Area D-1 at the TTMTTC.

Type IIIB - Those hard sites resembling Launch Complex F at the TTMTTC.

Three new ICBM launch sites were identified on [redacted] and one possible site was confirmed at the following complexes:

25X1

- DROVYANAYA
 - Launch Site F (6), Type IIIA
- KOZELSK
 - Launch Site C (1), Type III (Mode undetermined)
 - Launch Site F (6), Type IIIB
- SVOBODNYI
 - Launch Site F (5), Type IID*

SOVIET ICBM DEPLOYMENT

Only one ICBM complex has been identified since [redacted] that was Olovyannaya identified on [redacted]. At the 18 ICBM complexes, 3 new hard ICBM sites were identified on [redacted]. In addition, one possible soft site was confirmed on a re-analysis of [redacted]. These newly identified ICBM sites raise the total number of confirmed deployed sites to 95 (211 launchers), and 2 sites in the possible category. Of the 211 launchers about 100 are considered to be operational. The two possible sites are in very early stages of construction and it is not yet possible to make a firm evaluation. See Figure 1 for locations of deployed ICBM complexes.

In the last report we regrouped types of ICBM sites for the purpose of standardization. We are listing types again to stress the importance of standardization of types by the intelligence community (Figure 2).

Type I - Any rail-served soft site. To date, this type site has been observed only at Plesetsk and at Launch Complexes A and B, and probably G, at Tyura Tam.

Unusual Developments at Certain Type IIC Sites

Construction of some of the IIC sites identified at Tyumen and Kozelsk is continuing. No new sites of this type have been identified since [redacted] and those previously identified at

25X1

*Listed in 1 August report as a possible site, type undetermined.

25X1

Gladkaya have now all been converted to other type sites or abandoned. A hard site being constructed adjacent to the old Site C at Kozelsk was identified on [Redacted] but activity at the other IIC sites there continues. If this new hard site is a IIIB, it would be the first start of this type since [Redacted]. There are only 7 IIC sites remaining: 2 at Plesetsk, 3 at Kozelsk, and 2 (possibly 3) at Tyumen. Only those at Plesetsk are considered complete. Recent photography shows that construction activity at the remaining IIC sites, previously reported as being stopped or slowed, has resumed.

configurations contain three silos, but the MRBM site contains an additional unidentified structure, forming an "H" configuration (Figure 3). There is some question as to whether there is an excavation for a right rear or fourth silo at MRBM sites; photography shows that some sites, when completed, appear to have four similar objects which may be covers for four silos. Pending further analysis we will continue to carry 2 launchers at both IRBM and MRBM sites. The hard IRBMs are either separate complexes containing three hard sites, or are associated with soft IRBM sites. The hard MRBM is always associated with a soft MRBM complex. Because of these differences, Figure 5 has been changed accordingly. We have identified three silos at both IRBM and MRBM sites, and it is possible that all three are launch silos. However, certain features of the left rear silo shown in Figure 5 have construction dissimilarities which cast some doubt as to its function.

SOVIET MRBM/IRBM DEPLOYMENT

A total of 135 soft MRBM sites (540 launchers) and 14 soft IRBM sites (56 launchers) have been identified to date. In addition, 21 hard MRBM sites (42 launchers) and 20 hard IRBM sites (40 launchers) have been identified. Of these totals, the following new sites have been identified on [Redacted]

25X1

AKTYUBINSK

- Hard Launch Site No 1
- Hard Launch Site No 2

BYKOV

- Launch Site No 1 (Possible)

KROLEVETS

- Launch Site No 3

SIMFEROPOL

- Launch Site No 1
- Launch Site No 2

It is now possible to differentiate between the hard IRBM and hard MRBM sites. Both site

The newly identified MRBM site at Zhuravka appears to be unoccupied; however, the quality of photography is such that we will carry it as operational. In addition, there are five individual installations located at Marina Gorka, Rozhdestvenka, Kraskino, Belomorsk and Uzhgorod, which have been designated as MRBM or IRBM soft sites. Although no housing or associated support facilities have been identified in the immediate area, the sites are carried in Table 3 as complete. It is not possible to determine their operational status, or how they fit into the deployment pattern.
